### 1.10 Sets

A set is a collection of objects which are called elements.
Write

$$
s \in S \text { if } s \text { is an element of the set } S
$$

- The empty set $\emptyset$ is the set with no elements.
- A subset $T$ of a set $S$ is a set $T$ such that if $t \in T$ then $t \in S$.

Write

$$
\begin{aligned}
& T \subseteq S \text { if } T \text { is a subset of } S, \text { and } \\
& T=S \text { if the set } T \text { is equal to the set } S
\end{aligned}
$$

Let $S$ and $T$ be sets.

- The union of $S$ and $T$ is the set $S \cup T$ of all $u$ such that $u \in S$ or $u \in T$,

$$
S \cup T=\{u \mid u \in S \text { or } u \in T\}
$$

- The intersection of $S$ and $T$ is the set $S \cup T$ of all $u$ such that $u \in S$ and $u \in T$,

$$
S \cap T=\{u \mid u \in S \text { and } u \in T\}
$$

- The product $S$ and $T$ is the set $S \times T$ of all ordered pairs $(s, t)$ where $s \in S$ and $t \in T$,

$$
S \times T=\{(s, t) \mid s \in S \text { and } t \in T\}
$$

The sets $S$ and $T$ are disjoint if $S \cap T=\emptyset$.
The set $S$ is a proper subset of $T$ if $S \subseteq T$ and $S \neq T$.
